**Subject:** Lawrence, Kansas VRAD placement issue  
**Attachments:** U verse Cabinet Information.pptx

Diane,

Attached is information I've put together to help explain VRAD size, noise emission, safety compliance issues, etc.

The VRAD cabinet in question is an ALP-448US in a Purcell cabinet. It is placed in the public ROW and is not on the private landowner's property.

We are not aware of any safety issues in Kansas nor of any issues at all companywide with our VRADs at this time. We've installed 63 VRADs in Lawrence and have had no complaints with their installation, safety, etc.

Thanks.
