

Yard Waste

Yard waste entering storm drains or streams increases the risk of *flooding* and adds *pollutants* to the environment.

Leaves, grass clippings and other yard waste should be composted or placed in acceptable containers for curbside pick-up.

Leaves and grass clippings should not be left along the street.

Yard waste should not be placed in or near streams and creeks.

Yard waste clogs the stormwater system and must be removed by city crews to prevent flooding.
